

Temporary Noise Solutions - Project Profile

Client: Evolution Mining

Site: Edna May

Location: Western Australia

Product: Soundex Noise Barrier Fencing
– Trailer package.

The challenge: Mitigation of noise created by a large generator. The generator was positioned close to living quarters. Without the noise enclosure, the generator would have disrupted those sleeping.

The solution: TNS supplied 40 metres of noise barrier fencing – packaged neatly on one of our modern dual axle (braked) trailers. The fencing was wrapped around the generator, effectively trapping and absorbing the noise.

The result: A very impressive reduction in the noise created by these typically loud machines allowed the workers in the living quarters to sleep through uninterrupted.
